

EXIT-POCKET® WP

Waterproof device
for catheter
exit-site protection

Description

Device for exit-site protection. Waterproof pocket closed on four sides provided with adhesive hole to be fixed to the skin. Available also with opening/closing system at the bottom of the pocket.

Intended use

Containment of the catheter lumens during patient’s hygiene and care procedures: suitable for protection of all exit-sites / catheters.

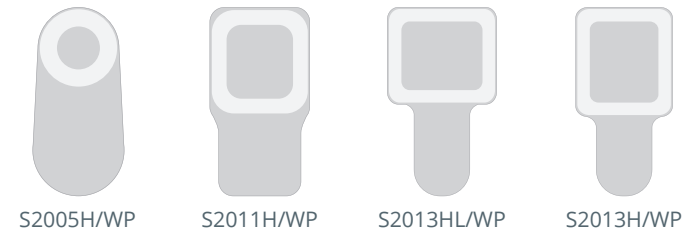

Indication

The device is completely waterproof: if well-positioned it protects the exit-site from getting in contact with water, preventing microbial contamination.
